

4 Tips for Summer Safety

This summer, as your cul-de-sac becomes the neighborhood baseball diamond, keep your family safe and aware!

Give trucks space.

If an average-sized loaded truck is going 25 mph through the neighborhood, it needs about 45 feet to stop. If you're driving behind a truck, put about five seconds worth of space between your car and them.

Know your collection day.

Be mindful of collection vehicles on your neighborhood's recycling and waste days. Always look both ways before entering the street.

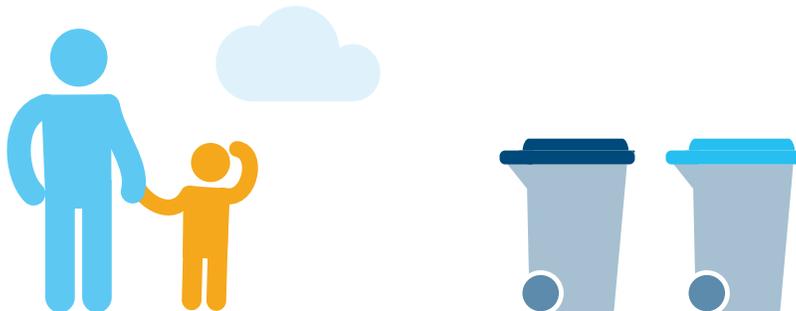

Make yourself visible.

Wave and make eye contact with your driver before passing in front of or behind them.

Watch from afar.

Your front porch or just inside your front window give you the best and safest view of your garbage collection.
